Author:	HTML-Kit Support
Audience:	Plugin Developers
Written In:	Delphi

## Description

Command line utility that makes it easier to send files to HTML-Kit from a command prompt window / DOS box. Note that this is not a plugin and does not need to be installed in HTML-Kit. Simply run it from a command prompt window.

### Features:

- Opens the specified files (with or without full path names) in HTML-Kit,
- Supports wild cards such as \*.html for opening all matching files, and
- Provides the ability to go to a line number after opening the files (this option can be used to focus in on a specific line when sending files from external applications that pass a file name and a line number).

### Usage samples:

- hkOpen file.htm
- hkOpen a.htm b.htm
- hkOpen c:\mysite\file.htm
- hkOpen \*.htm
- hkOpen /line:50 file.htm

## Requirements

- HTML-Kit Build 292 or 290

## Download

## Common Questions

*Q: Which programming language was used to write it?*

A: hkOpen was written in Delphi. More plugins written in Delphi can be found on the Plugins page.

*Q: Do I need the exact versions of software listed under the Requirements?*

A: The versions listed are the minimum versions required by this plugin. For example, a plugin that requires HTML-Kit Build 290 will run on HTML-Kit Build 292 as well.

*Q: What's the best way to check which version of HTML-Kit I'm using?*

A: The build number can be found on the "About" dialog, which is located on HTML-Kit's "Help" menu.
