Latest Info:	Plugin page on the Web
Version:	1.03
Date Published:	21-Jan-2002
Author:	Marialberto Mensa

## Description

Plugin to make it easier to create SVG files. The elements and properties have been organized in different menus, each menu being dedicated to a specific broad theme: "text", "shapes", "filters", "animation" etc. Each of the several thematic menus includes all the entities and properties relevant to the subject, and conversely elements and properties are duplicated on all the menus where they are relevant: e.g. the fill property is applicable to text and shape elements, so it appears in these two menus (at least). Whenever applicable, tag text written into the SVG document includes all the predefined values assumed by the SVG specifications.

## Requirements

- HTML-Kit Build 292 or 290
- If using Build 290, hkScript 290.1

## Download

- Address:

## Common Questions

*Q: How do I install mmSVG?*

A: Download the "mmSVG" plugin. It's not necessary to unzip the \*.zip file, HTML-Kit will expand it to the appropriate directory during the installation.

Select "Install | Install Plugin" from HTML-Kit's "Tools" menu. Point to the downloaded \*.zip file and click "OK."

If any additional prompts appear, follow them to

complete the installation.

*Q: How do I run it?*

A: mm SVG

mmSVG's icon will appear on the "mm SVG" tab on HTML-Kit's Actions Bar. It can also be invoked from the "Actions | mm SVG" sub menu.

*Q: Which programming language was used to write it?*

A: mmSVG was written in hkScript. More plugins written in hkScript can be found on the Plugins page.

*Q: What's the quickest way to uninstall mmSVG?*

A: Right click the mmSVG icon on the Actions Bar and select "Uninstall." Alternatively, the "Tools | Install | Uninstall Plugins" menu option in HTML-Kit can be used to uninstall this and other plugins.

*Q: Do I need the exact versions of software listed under the Requirements?*

A: The versions listed are the minimum versions required by this plugin. For example, a plugin that requires HTML-Kit Build 290 will run on HTML-Kit Build 292 as well.

*Q: What's the best way to check which version of HTML-Kit I'm using?*

A: The build number can be found on the "About" dialog, which is located on HTML-Kit's "Help" menu.

*Q: What's this requirement for hkScript?*

A: hkScript 290.1 requirement is only applicable to the users of the older HTML-Kit Build 290. Since the latest version of hkScript is already included in HTML-Kit Build 292, the users of Build 292 can ignore it.
